*Allowable Subject Matter*

Claims 1-18 are allowed.

The following is an examiner's statement of reasons for allowance: The closest art of record (Fung et al (6,482,999) discloses a process of conversion of oxygenate to olefins in the presence of a molecular sieve (the abstract). Fung discloses that before the deactivated catalyst is regenerated by oxygen, the catalyst has been stripped with steam to remove volatile organics from the catalyst (col. 5, lines 36-55). This stripping step appears to be similar to the step of stripping as called for in present claim 2. However, Fung is totally silent as to a step to remove oxygen from the regenerated catalyst as called for in step c of claim 1 which, as disclosed by applicants in paragraphs 0028 and 0029, is carried by stripping the catalyst with inert gas or steam. This oxygen-removing step is similar to the stripping step of Fung, but they have different purposes (removing oxygen versus volatile organics) and are carried out in different sequences of steps (before versus after the regeneration step). One having ordinary skill in the art who studies the Fung process and the claimed process must recognize that these differences also mean that Fung knows nothing about the increase of oxygen in the regenerated catalyst. Since Fung does not know or disclose the increased content of oxygen in the catalyst, the step of removal of the oxygen is no way obvious from the Fung teaching.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
